

Method and Feasibility Blueprint

CFAN 3091V | Milestone 6, Proposal Development Track

Name: _____ **Due:** October 14, 2026

This is a design memo, not a form to fill in tightly. Use these headings, write in whatever form makes the decision reviewable, and add a table where one helps. Length is not the target. You may type it instead using the same headings. If an item genuinely does not fit your field, write **not applicable** and say why. Do not invent details to fill a box.

1. Question and Design

Research question, as it now stands:

The design it requires: ☐ quantitative ☐ qualitative ☐ mixed ☐ discipline-specific: _____

Why the question requires that design, in terms of what would count as an answer:

What one strand cannot deliver on its own. Name the part of your question that a single approach leaves unanswered, and say whether you are accepting that limit or designing around it.

If you marked mixed, answer both. Which connecting logic: ☐ one strand explains the other ☐ one strand builds the other ☐ the strands test the same claim from different angles

Where exactly the strands meet, and at what point in the work:

2. What You Will Study

Unit, population, system, cases, or materials:

3. Evidence or Data

What you need, and how you expect to obtain it:

4. Collection, Measurement, and Analysis

The steps you can name at this stage. Name what is decided; say plainly what is not yet decided rather than guessing.

5. Feasibility Constraints

Mark each that applies and name the specific constraint.

- ☐ Access _____
- ☐ Time _____
- ☐ Equipment or facilities _____
- ☐ Sample or case availability _____
- ☐ Permissions _____
- ☐ Safety _____
- ☐ Cost _____
- ☐ Ethics or human-subjects review _____

The largest of these, and why it is the largest:

6. Risk and Alternative

One important risk to the preferred design:

A feasible alternative if it does not work:

7. Calibrated Claim

Take one published claim and narrow its wording to what its evidence actually supports. Both versions are required.

Source, short citation: _____

Claim as published:

Narrowed version you would accept:

What in the evidence forced the narrowing:

8. One Question for Your Primary Advisor

Specific enough to be answerable. Not “is this a good plan?”

Instructor Check

☐ Satisfactory ☐ Not Yet Satisfactory

Satisfactory means a reader can trace the question to the proposed evidence and analysis, identify the largest feasibility constraint, and see what still needs advisor or specialist judgment.

Brief feedback or next step:
